Product Description

8V1010.501-2 B&R ACOPOS INTELLIGENT SERVO DRIVES ,110 VAC - 230 VAC

Description

Model	8V1010.501-2
Brand	B&R
DataSheet/Catalogue	In PDF File
Weight	0.05 KG
Condition	Normal
Description	ACOPPOS servo drives use the information on the motor's embedded parameter chip, which contains all relevant mechanical and electronic data. The work-intensive and error-prone task of manually setting parameters is no longer necessary and start-up times are substantially reduced. During service, relevant data can be requested and the cause of any problems that may exist can be determined. The ACOPOS servo family is also available with partially-coated circuit boards. These versions have identical specifications but are more robust in regard to environmental influences such as dust, aggressive vapors or moisture.
